

# Introduction of T-COIL

Heat Exchanger for Heat Recovery

Heat Pipes-Type

**株式会社SDAT**  
Sales Dept.

## Content

1. Regarding Decarbonization and Energy-saving
2. About T-COIL
  - How to use the Exhaust Heat Recovery of T-COIL
  - What is T-coil?
  - What is Heat Pipe?
3. Features of T-COIL
  - Three main features (①、②、③)
  - Other features
4. Type of T-COIL
5. Application and History
  - Application
  - Effect of Energy Saving (①、②)
  - Achievement for petrochemical plants
  - Achievement and History
  - Overseas Expansion
6. T-COIL and Energy-saving
7. Steps to consider to introduce T-COIL

# 1. Regarding Decarbonization and Energy saving

## Greenhouse Gas Reduction Target

	【2030】	【2050】
Japan	-46% Compared with 2013	Virtually Zero
EU	-60% Compared with 1990	Virtually Zero
China	-65% Compared with 2005	Virtually Zero

## 3 Approaches to Decarbonization

**Introduction of Non-fossil Energy**  
(Green Energy etc.,)

**Establishment and Introduction of CO2 Treatment**  
(CCUS etc.,)

**Energy-saving**

It is easiest for us to work on Energy-saving of these three approaches.

Energy Saving is getting more important in the world now.

## 2. About T-COIL

### How to use T-COIL

T-COIL can reuse energy that is used once again!

Before

Exhaust air goes outside with the heat  
⇒ Loss of heat

After

Heat of exhaust air is reused in Supply air again  
by T-COIL  
⇒ Heat Recovery

## 2. About T-COIL : What is T-coil?

T-COIL is an air to air heat exchanger using **Heat Pipes**.

T-COIL has a lot of fined **Heat pipes** and is separated by plates around the center of it.

Once exhaust(high temp) air and supply air (low temp) flow into T-coil in the opposite direction each other , it can transfers the heat efficiently.

## 2. About T-COIL : What is Heat Pipe?

It is a function of heat carrier.

Heat pipe is a thermal conductive element that can transfer heat to a far area.

Fluid is enclosed in an air tight container.  
 Once one side of heat pipe is heated, the fluid evaporates and absorbs the heat. And then, the fluid transfers the heat to the other side and releases the heat and condenses , then the liquid fluid returns to one side by gravity.  
 Repeating this cycle causes efficient heat transportation.

<Bubbled up Video>

Heat pipe works like this , because inside of heat pipe is kind of vacuuous.

⇒It is the same phenomenon that water boils under 100°C on high mountains.

### 3. Features of T-COIL : Three Main features

T-COIL has 3 major strong points.

①

High Efficiency and Compact

②

Long Life and Maintenance saving

③

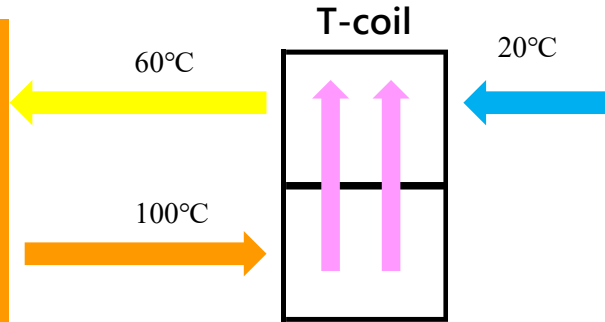

Clean supply air

### 3. Feature of T-COIL - ① High Efficiency and Compact

T-COIL recovers exhaust heat efficiently with using heat pipes as conductive elements.

Temp Efficiency rate  
Is usually over 50%

$(100^{\circ}\text{C} - 20^{\circ}\text{C}) \times 50\% = 40^{\circ}\text{C}$   
 $20^{\circ}\text{C} + 40^{\circ}\text{C} = 60^{\circ}\text{C}$  (supply air temp)

High Efficiency and Compact

#### Air preheating of dryer

<Example>

	Supply Air	Exhaust Air
Flow Rate (Nm3/min)	100	100
Inlet Temp. (°C)	20	100
Efficiency (%)	50	50

It does not takes much money to install T-COIL.

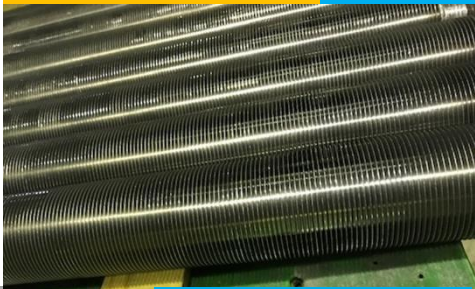

### 3. Feature of T-COIL -② Long life and Maintenance saving

The mechanical trouble does not occur and the parts replacement is unnecessary.

T-COIL can be used for a long time because it is made of best materials that depend on the air property.

Materials	Fins・Tubes	Aluminum , Copper , Steel ,Stainless steel
	Frame	Steel ・Stainless steel

Aluminum fin

Stainless steel

Steel tubes and Steel flame

### 3. Feature of T-COIL -③ Clean supply air

Because T-COIL is partitioned off into two parts(supply air part and exhaust air part) by center plates, exhaust air leaks to supply air very little.

Rate of Leakage between  
supply air and exhaust air  
0.052%~0.328%  
(VTC type approx. rate)

The supply air that is heated by  
T-COIL goes to a dryer  
with keeping air clean.

### 3. Features of T-COIL - Other features

T-COIL does not produce much loss of pressure (About 200~300Pascals).  
So you might continue to use your existing blower without replacing it.

- Running cost of T-COIL is not required because T-COIL does not use any energy to work.

T-COIL can be installed in various ways depending on the site of the factory.

Vertical way

Horizontal way

UP and Down way

## 4. Type of T-COIL

### ITC type

#### (1) Outline of product

- After Heat pipes are made of Individual fin tubes, they are put up in the frame.

ITC type can apply to various temperature of air and dust of air since we have different pitch fin tubes.

## (2) Structure of ITC type

## VTC type

### (1) Outline of product

The pipes are put into plates that have large heating surface area and are expanded by liquid pressure. After that they are processed to Heat pipes

VTC type can apply to heat recovery of ventilation for air conditioning

## (2) Structure of VTC type

Cross sectional shape of tube  
(finned inner of tube)

## 5. Application and History : Application

T-coil have been applied to various industrial fields.

### Industrial Furnace

Naphtha cracking furnace, Heating furnace VOC treatment furnace

### Industrial dryer

#### Film

Film production line (OPP, PET, PA), Film coating line, Film laminate processing line

#### Paper

Paper machine line, Paper coating line

#### Printing

Gravure, Flexographic

#### Fiber

Synthetic fiber, Elastic fiber, Non-Woven fabric

#### Others

Food, Coating, Powder dryer, Pre-heat and cold for dehumidifier

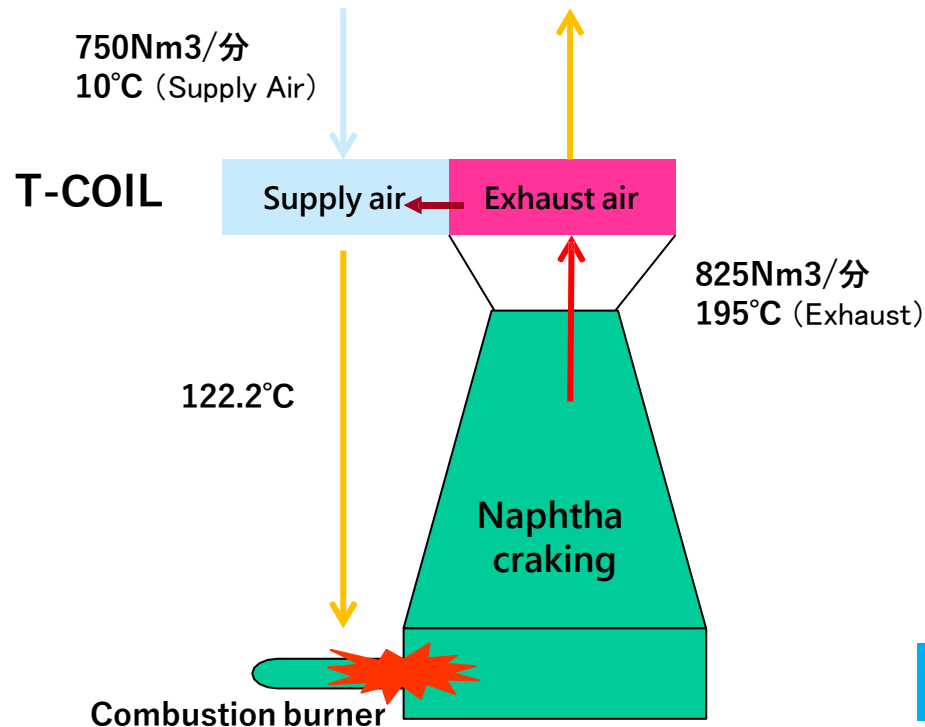

### Boiler

Preheating supply air for combustion

Coverage of temp  
-20°C ~ 430°C

## 5. Application and History

### Effect of Energy Saving ① Naphtha cracking

#### <Condition>

Heat Recovery: 1,573,000kcal / hr

LNG price: JPY65 / m<sup>3</sup>

Calorific value of LNG: 9,900kcal / m<sup>3</sup>

Operation time: 7,000hrs / yr

$$(1,573,000 \div 9,900) \times \text{JPY}65/\text{m}^3 \times 7,000\text{hrs}$$

=about JPY73,000,000/yr (Energy saving cost)

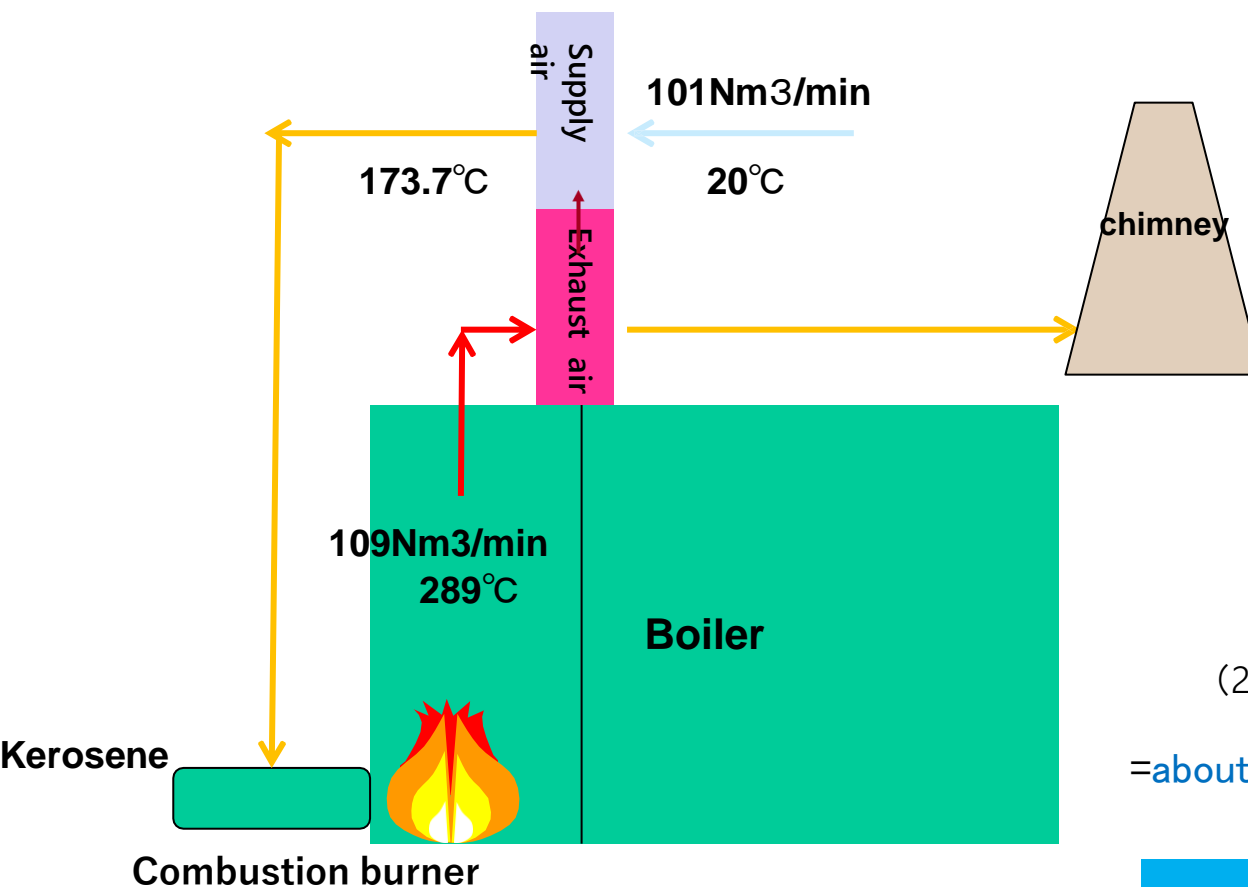

CO<sub>2</sub> Reduction about 2,281tons

## 5. Application and History

### Effect of Energy Saving ② Boiler

T-COIL

<Condition>

Heat Recovery: 288,900kcal/hr

Kerosene price: JPY76/L

Calorific value: 8,350kcal/L

Operation time: 2,700hr/yr

$$(288,900 \div 8,350) \times \text{JPY}76/\text{L} \times 2,700\text{hr}$$

=about JPY7,100,000/yr Energy-saving cost

CO2 Reduction about 221tons/yr

## 5. Application and History : Achievement and History

Various customers have introduced and used T-COIL.

### Industrial furnace

Mitsubishi Chemical Corporation, Mitsui Chemicals, Inc.,  
Maruzen Petrochemical Co., LTD., Showa Denko K.K. etc.,

### Industrial dryer

Toppan Printing Co., LTD, LINTEC Corporation,  
Nakamoto Packs Co., LTD, TERAOKA SEISAKUSHO CO.,LTD.,  
Maxell, LTD.

### Our history

- 1977 Showa Aluminum Corp., launched T-COIL.
- 2001 Showa Denko K.K. Merged with Showa Aluminum Corp.,
- 2017 Showa Denko Aluminum Trading K.K. took over T-COIL from Showa Denko K.K.

Aug.2021 Showa Denko Aluminum Trading changed its name to SDAT CO.,LTD

**S: Showa D: Dynamic A: Aluminum solution T:Trading**

## 5. Application and History : Overseas Expansion

We have provided T-COIL for not only companies in Japan but also Asian locations.

Thailand , China, Taiwan, Korea etc.,

Many companies take advantage of T-COIL for their energy-saving over the world.

Export package

## 6. T-COIL and Energy-saving

T-COIL achieves energy-saving efficiently  
for a long time  
in spite of saving maintenance and running-cost.

T-COIL helps you promote Sustainable Development Goals by saving energy.

## 7. Steps to consider to introduce T-COIL

### ① Showing your condition

You show us your condition. Flow rate and inlet temp are required at least to consider T-COIL.

### ② Our proposal and your check about the effect

We turn in our proposal to you. You take a look at it and confirm the expected effect.

### ③ Decision on specification and delivery date

We decide the specification to consider your site where T-coil will be installed. And, you and we decide the delivery date.

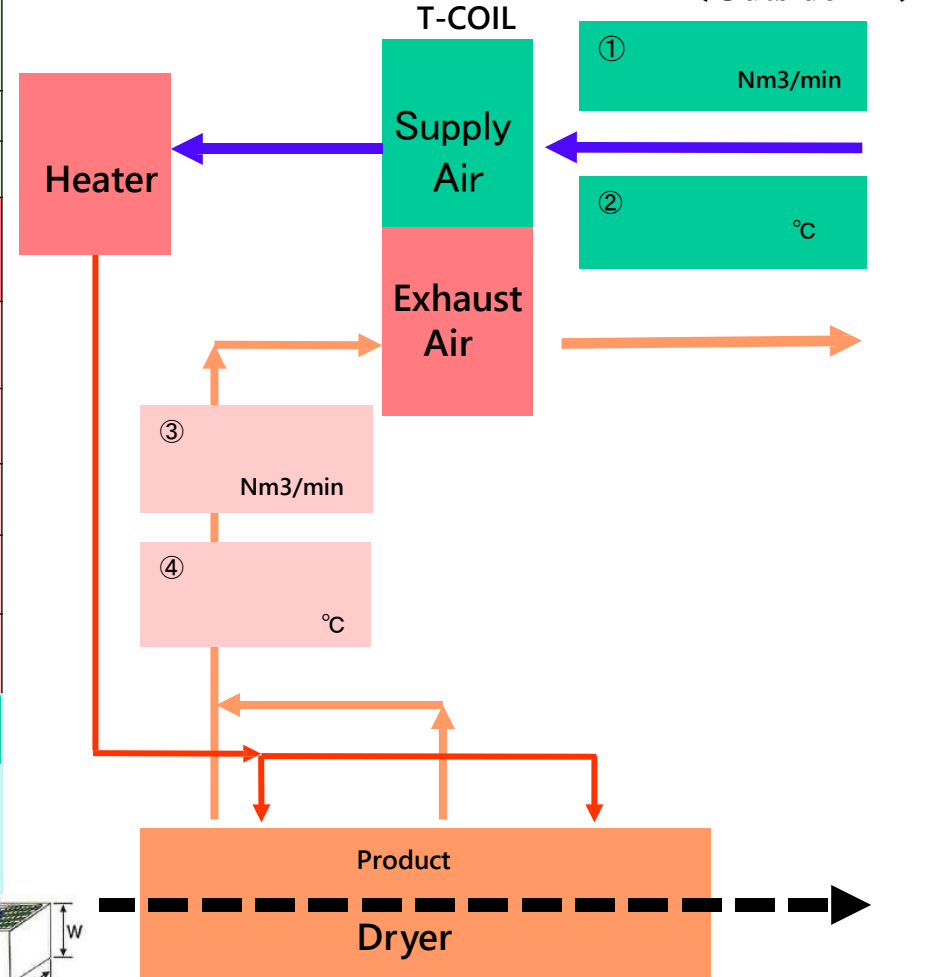

Condition Entry form 【 ①、②、③、④ is required 】

DATE:

<Outside Air>

Line			
Fuel	LNG , LPG , Kerosene , Heavy oil , Electricity , Other ( )		
	Price ( / )		
Operating Time	hr / yr		
Necessary to fill in	Supply Air	Exhaust Air	
	Flow Rate (Nm3/min)	①	③
	Inlet Temp. (°C)	②	④
	Humidity (kg/kg <sup>4</sup> )		
	Outlet Temp. (°C) * if you have any request		
	Pressure Drop(Pa) * if you have any request		
	Limit of Frame Out Line	H	x L x W

\* Others (Properties of Supply and Exhaust Air etc.,)

Thank you very much for your listening.
